Provide a project plan showing team member responsibilities, work arrangements and any information team members will be using to coordinate their activities. You should also mention any software tools used by the team to assist project management.

We will be using agile software methodology meetings every Monday to discuss our tasks and solve any problem that may arise through our progress. Our plan is to achieve our deliverables and keep on track with a gantt chart that was created. We also set up a group chat on **Facebook Messenger** as a means to communicate outside our meetings and to ask questions and discuss things we might miss during our meetings.

Most of the work will be done as a team, as this will help collectively share our understanding and be able to contribute to the project. The responsibilities have been created to distribute our workload according to our strengths that we discuss in our initial meeting.

Team Members	Responsibilities
Aaron	- Report Writing - Web developer - Organiser
Amelia	- Report Writing - API developer
Kevin	- Report Writing - Database management - Swagger documentation
Logann	- Report Writing - Testing
Peter	- Build Web Scraper - Web Developer - Report Writing

Software tools that we will be using to maintain our code will be **Github**, allowing for team members to implement and share the same source files and keep track of any changes. Also to organise our work and task, we have set up a **Trello** board to track our

progress. For documentation and report writing, we will be using **Google Docs** as it allows team members to work in real time.
